

CSCS 342 – Web Application Development

Assignment 1

Note:

- The deadline for submission of assignment is **Monday, May 31, 2021, 11:59pm**
- Submission **must** only be done via Moodle. No email submissions will be accepted and will result in **ZERO** marks.
- Do not copy the code from the internet or from a friend. In case of plagiarism, you will get **ZERO** marks.
- Late assignments will **not** be accepted.
- Include all files in one folder. The folder should be named after your name and roll number. For example, **Omer_2215XXXXX.py**

Question:

Explore the CSS Grid at the link below:

https://www.w3schools.com/css/css_grid.asp

You are required to use HTML and CSS to create a layout like **daraz.com**. This should include all the products displayed on the page in the form of a grid.

Each product should have its own separate page containing the details of that product/item.

For example, if I click on any item then it should navigate to a new page containing description for that item.

Your website **must** have Header bar, Grid system, Footer.

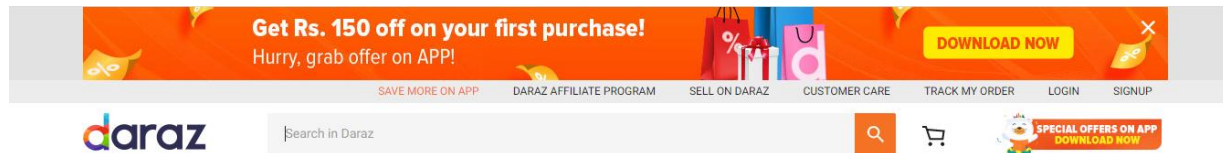

The Grid should have at least 6 rows and 4 item boxes inside each row. Add hover effects to each item box and if user selects any item, then it should navigate to new page containing description for that item. 5 demo descriptions pages will be enough.

Try to make your footer exactly like it has been shown in the below images. Add some hover effects in it.

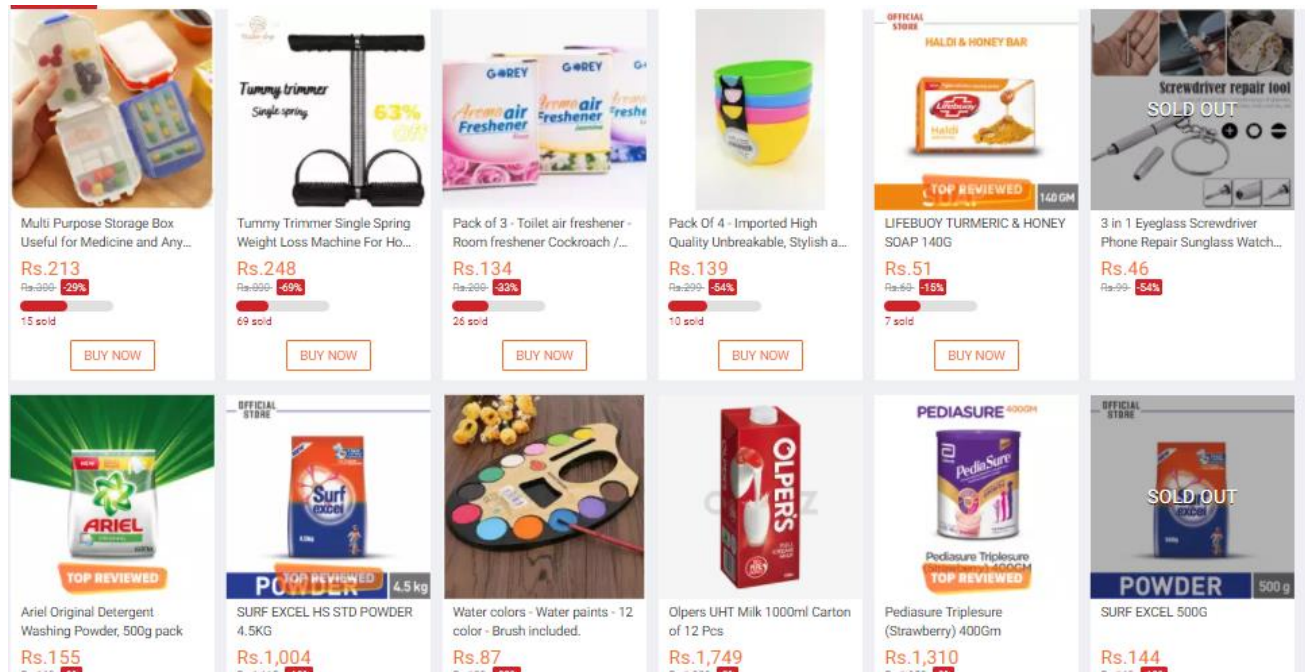

Note:

- Place all images in one folder and include that in the zipped folder.
- Be as creative as you can to earn bonus points.

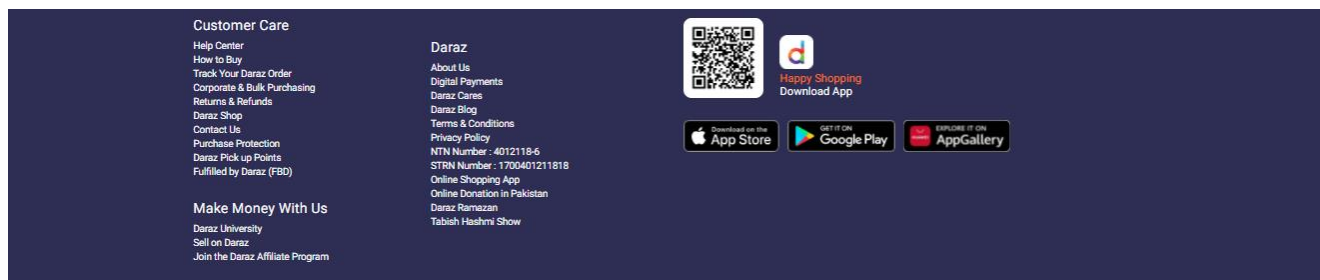

Header:

Grid System:

Footer:
